Abstraction, virtualisation and managing of resource.

- Abstraction
 - How do we create an abstraction layer that provides an environment for programming of a process?

- Abstraction
 - How do we create an abstraction layer that provides an environment for programming of a process?
- Virtualisation
 - How do we create the image of dedicated hardware while in fact we have several process sharing the same hardware?

- Abstraction
 - How do we create an abstraction layer that provides an environment for programming of a process?
- Virtualisation
 - How do we create the image of dedicated hardware while in fact we have several process sharing the same hardware?
- Resource management
 - Given that we have limited amount of resources, how do we share them in a fair way?

C programs

```
int counter = 0;
void hello(char *name){
 printf("Hello: %s, %d\n", name, counter);
int main() {
  char *me = argv[1];
 while(counter != 10) {
     counter++;
    hello(me);
     sleep(1);
  return 0;
```
